In the age of the digital economy, transformative technologies, such as Artificial Intelligence (A.I.) and the proliferation of data, have ushered in a new era of unprecedented opportunities and challenges.

Such digital transformation greatly affects modern democracies, which must find ways to regulate it and keep it under control, for example, through A.I. Acts or Executive Orders. With no safeguards, A.I.-related risks can easily spread and be progressively harder to control.

This conversation aims to shed light on some of the key issues of this digital revolution, including A.I., digital constitutionalism, data management, misinformation, and emerging cybercrimes.

Introductory Remarks

Pietro Sirena Dean, Bocconi School of Law
Christiana Ochoa Dean, Maurer School of Law

Introduction of the Topic and Moderators

Simon Sun S.J.D. Graduate, Maurer School of Law
Gregorio Casoni J.D. Graduate, Bocconi University and LL.M. Graduate, Maurer School of Law

Speakers

Scott J. Shackelford Provost Professor of Business Law & Ethics, Kelley School of Business, Indiana University
Oreste Pollicino Full Professor of Constitutional Law, Bocconi University

Q&A
